Core Technical Skills

Data & Analytics

Data Analysis
Log Analysis
Operational Data Analysis
Data Processing
Exploratory Data Analysis
Data Visualization

Infrastructure & Monitoring

Infrastructure Monitoring
Observability
System Monitoring
Incident Detection
Alert Triage
Incident Response Support

Cybersecurity

Security Monitoring
Threat Detection
Security Incident Analysis
SOC Operations

Programming

Python
Shell scripting
Automation scripting
C++, Arduino
HTML CSS, JS

Geospatial / GIS

Geospatial Data Analysis
GIS Data Processing
Geospatial Visualization

Tools & Platforms

Linux
Docker
Grafana
Prometheus
Node Exporter
Git
Streamlit

Education

Bachelor's Degree in Computer Science
Anhanguera University SP
2023 – Present

Certifications

Cybersecurity
SRE (Site Reliability Engineering)
DevOps
AWS
Fortinet
Data Center
Data Science
Python data analysis with SQL
Data Analysis with Python
Data Analysis with R

Professional Summary

- Monitoring, Security, and Data Analyst with experience in SOC/NOC environments supporting critical infrastructure for large organizations, banking systems, and telemedicine platforms.
- Specialized in infrastructure monitoring, log analysis, incident detection, and operational data analysis. I utilize Grafana, Prometheus, Linux, and Python to transform infrastructure telemetry, security logs, operational metrics, and raw datasets into actionable insights for incident response, system reliability, and data analysis projects.
- Currently expanding my expertise in Data Analytics and Geospatial Data Analysis through projects involving operational data pipelines, automation, and interactive geospatial visualizations.
- Interested in roles related to Data Analytics, Security Analytics, Observability Engineering, and Infrastructure Monitoring.

Professional Experience

Cybersecurity Support Analyst

Brasilpontoscom

2025 – 2026

- Operate in SOC/NOC environments supporting security and observability of critical infrastructure systems.
- Monitored infrastructure, network services, and system health using monitoring and security platforms
- Analyzed logs, metrics, and alerts to detect anomalies, operational risks, and potential security incidents
- Supported incident response processes by providing data-driven insights from monitoring systems
- Investigated operational patterns and failure signals through log analysis and metrics correlation
- Contributed to improved system reliability through proactive monitoring and incident detection

Infrastructure / IT Operations Support

Thomas Greg do Brasil

2023 – 2024

- Worked in distributed infrastructure environments supporting government service units and high-security document facilities.
- Deployed and standardized computing and networking environments across multiple operational locations
- Maintained network assets, workstations, and system infrastructure ensuring operational continuity
- Provided technical support for mission-critical infrastructure environments
- Assisted in infrastructure troubleshooting and operational incident resolution
- Supported field operations requiring high reliability and strict operational controls

IT Analyst – Automation & Operations

Atos

2023

- Delivered infrastructure automation and operational optimization for a large-scale banking technology project.
- Developed automation scripts to optimized system configuration and infrastructure provisioning
- Reduced device deployment time by 50% through process automation and workflow optimization
- Minimized manual operational tasks, increasing efficiency and consistency across environments
- Designed and implemented custom technical solutions aligned with business and operational requirements
- Recognized as a technical reference during implementation activities, leading to a promotion within 2 months due to the efficiency and impact of the automation solutions developed

IT Support & Systems Operations

Telelaudo

2021 – 2023

- Supported telemedicine infrastructure environments requiring high system availability and operational stability.
- Provided remote and on-site technical support for systems, networks, and workstations
- Maintained Windows and macOS environments used by healthcare professionals
- Implemented and supported medical software tools used in telemedicine operations
- Assisted in infrastructure maintenance and technical troubleshooting
- Delivered user training to improve operational efficiency and tool adoption

Technical Projects

Glicoseando – NDVI Time Series Analysis for Precision Agriculture

Technologies: Python, Streamlit, Geospatial datasets

- Interactive dashboard for vegetation monitoring using 26 years of satellite data (EMBRAPA SATVeg API / INPE Brazil Data Cube).
- Built a complete time series analysis with peak detection to identify vegetation cycles and seasonal patterns
- Created interactive geospatial visualizations and temporal dashboards
- Delivered vegetation health monitoring, land-use analysis, and agricultural decision support

Skills demonstrated:

NDVI, geospatial data analysis, interactive dashboards, remote sensing, time series analysis

Brazilaoero – Brazilian Airports Geospatial Data Analysis

Technologies: Python, Streamlit, Geospatial datasets, CSV data processing

- Live application for geospatial data analysis project focused on Brazilian aviation infrastructure.
- Built a complete data pipeline to process aviation datasets
- Created interactive geospatial visualizations of Brazilian airports
- Delivered an analytical interface using Streamlit dashboards

Skills demonstrated:

Geospatial data analysis, GIS visualization, data pipelines, dashboards

Monitoring Stack – Grafana + Prometheus + Node Exporter

Technologies: Docker, Prometheus, Grafana

- Complete infrastructure monitoring stack using containerized services, automated via shell script for efficient deployments.
- Implemented an observability stack for system metrics collection and visualization
- Configured Prometheus metrics scraping and Grafana dashboards
- Created monitoring dashboards for infrastructure performance analysis

Skills demonstrated:

Observability, infrastructure monitoring, metrics analysis, dashboards, scripting

Linux Auto Update

Technologies: Linux, Bash

- Automation tool designed to maintain Linux systems updated automatically.
- Developed scripts to automate system updates for Debian and Ubuntu environments
- Implemented scheduled execution and boot automation
- Reduced manual maintenance tasks in Linux infrastructure environments

Skills demonstrated:

Linux automation, system administration, scripting

Maestro – Minimalist File Organizer

Technologies: Python

- Automation tool that organizes files based on type and directory rules.
- Developed a Python script that categorizes files automatically by extension and folder
- Simplifies file management workflows through automation

Skills demonstrated:

Python automation, scripting, data processing
