MATHEUS FRANCISCO LINO BISSOLI

SOC / NOC Analyst | Observability (SRE) | Cloud Support
Vitória, ES, Brazil (Open to Remote, Hybrid, or On-Site Positions)

E-mail | LinkedIn | Portfolio | GitHub

PROFESSIONAL SUMMARY

IT professional with 5+ years of experience in the field, focused on SOC/NOC operations, critical infrastructure monitoring (Grafana and Prometheus), and log analysis with ElasticSearch (ELK). Currently in the final semester of a Bachelor's degree in Computer Science, with strong hands-on expertise in Python and Shell Script automation, Linux administration, and Cloud infrastructure (AWS). Proven track record in reducing asset provisioning time by 50% through automation and proactively correlating metrics and events to accelerate incident response and ensure high availability.

TECHNICAL SKILLS

- **Observability & Monitoring (SRE):** Prometheus, Grafana, Grafana Loki, Alertmanager, Node Exporter, Elastic Stack (ElasticSearch / ELK), AWS CloudWatch, OpenTelemetry, Jaeger (Distributed Tracing), Alert Triage, and Incident Management.
- **Cybersecurity & SOC Operations:** Security Monitoring (SIEM), Threat Detection, Log Analysis & Correlation, Incident Response, Firewall (Cisco ASA), WAF, Reverse Proxy, OWASP Top 10, Vulnerability Analysis (Web Pentesting, DAST, SCA), and Container Security (Docker Scout, Trivy).
- **Cloud, Containers & IaC:** AWS (EC2, ECS, EKS, S3, VPC, RDS, DynamoDB, Lightsail, Elastic Beanstalk, FinOps Cost Control), Docker, Kubernetes (EKS, AKS, GKE, Helm Charts, Istio Service Mesh, LivenessProbe), Terraform, and Ansible.
- **Automation, CI/CD & Infrastructure:** Python (Scripting, Automation, Pandas, GeoPandas), Bash / Shell Script, Regular Expressions (Regex), n8n, Linux (Debian/Ubuntu, CLI, Processes & Permissions), SQL, Git, GitHub Actions (CI/CD Pipelines, Rollback, Load Testing), and Networking (TCP/IP, DNS, SSH, VLANs, Routing, IPv6).

PROFESSIONAL EXPERIENCE

Brasilpontocom — SOC / NOC Cyber Security Analyst

2025 – 2026

- Proactively monitored critical infrastructure, network services, and thousands of endpoints and web applications using centralized dashboards, ensuring continuous operational integration and availability.
- Built custom log filters, correlation rules, and visualizations for active Threat Hunting and suspicious traffic pattern analysis, strengthening network defense and containing security incidents.
- Analyzed real-time logs, telemetry metrics, and alerts to detect anomalies and operational risks, delivering data-driven diagnostics that accelerated incident response and reduced Mean Time to Resolution (MTTR).
- Correlated security alerts with infrastructure performance metrics, quickly differentiating operational failures from cyber incidents and reducing false positives.

Atos — Team Lead Automation & Operations

2023

- Designed technical solutions aligned with business requirements through direct communication with stakeholders, earning recognition as a technical reference and a promotion to Team Lead within just 2 months on the project.
- Developed automation scripts and workflow optimizations for system configuration and infrastructure provisioning (workstations and ATMs) in a large-scale banking project, reducing device deployment time by 50%.
- Automated repetitive operational tasks across distributed environments, eliminating manual human errors and increasing delivery standardization across thousands of supported assets.

Thomas Greg do Brasil — Infrastructure Security Operations

2023 – 2024

- Administered SQL databases containing sensitive government data and managed firewalls and network assets in high-security facilities, ensuring data integrity, strict compliance, and operational continuity.

Telelaudo — Cloud Infrastructure Operations

2021 – 2023

- Provided operational support for AWS cloud infrastructure and Linux, Windows, and macOS environments for a 24/7 global telemedicine platform, executing SQL queries and proactive monitoring to eliminate performance bottlenecks and ensure high availability.

PROJECTS

- **Monitoring Stack (Docker + Prometheus + Grafana + Node Exporter):** Implemented a complete containerized observability stack in Docker with automated deployment via Shell Script, configuring metric scraping in Prometheus and real-time infrastructure performance dashboards in Grafana.
- **Linux Auto Update (Bash Scripting & Linux Automation):** Developed a Bash automation tool for Debian and Ubuntu servers featuring scheduled execution and boot automation, reducing manual maintenance work and security patching across Linux environments.
- **Glicoseando – Time-Series Analysis & Interactive Dashboard (Python, Streamlit, Pandas, GeoPandas):** Developed an analytical application integrating API data (EMBRAPA SATVeg and INPE) to process 26-year time series, implementing peak-detection algorithms and interactive Streamlit dashboards for indicator monitoring and decision support.
- **Brazilaero – Data Pipeline & Aviation Infrastructure Visualization (Python, Streamlit, GeoPandas, CSV):** Built an end-to-end data extraction, cleaning, and processing pipeline using ANAC (National Civil Aviation Agency) databases, delivering an interactive analytical interface in Streamlit for infrastructure mapping and visualization.

EDUCATION

- **Bachelor of Science in Computer Science** — Anhanguera (Final semester).

CERTIFICATIONS & CONTINUING EDUCATION

- Fortinet Certified Fundamentals (FCF) – Technical Introduction to Cybersecurity 1.0.
- Completed Alura Career Tracks (+700 hours): SRE (60h), Container Orchestration with Kubernetes (66h), Cybersecurity (52h), Continuous Integration & Delivery CI/CD (48h), AWS Cloud & Observability (62h), Infrastructure as Code with Terraform & Ansible (44h), OWASP Security & Secure Development (84h), Defensive & Offensive Security (59h), and Python for Data (90h).

LANGUAGES

- **Portuguese:** Native.
- **English:** Advanced / Full Professional (fluent reading of technical documentation, incident report writing, and technical communication).
